

The Iomas AnatLab System - Demo

Cyndy Lilagan, Steve Huntley, Mike Doyle, Steve Landers,

The Iomas AnatLab system is an online navigator for knowledge relating to human anatomy. It enables an anatomy student to easily browse through and interact with detailed cryosection images from the Visible Human male dataset.

AnatLab provides a direct-manipulation interface, whereby the user can click on a part of the body to see it in more detail, and click on any area of any section through the body to have the system immediately identify the structure and provide a variety of information related to that structure.
